

The Augusta kiosk platform brings a unique look to your self-service application, providing both visual and functional versatility. The floating face plate is designed to clearly accentuate the consumer interface while minimizing the working components behind the application.

Available in a slim or deep back cabinet, the Augusta can house a wide mix of transactional components, including credit card and license readers, bill acceptors, receipt printers, multiple scanners, ID camera, and other supporting elements. The platform supports multiple mainstream self-service applications in retail, loyalty, bill payment, check-in, order entry, and more.

The enclosure is designed with hinged panel doors on the front and back for simple service and maintenance. Diverse branding artwork and finishes can be combined on the front fascia, header sign, and enclosure to create a distinctive look and feel that complements your deployment setting.

#### **BASE MODEL INCLUDES:**
